SUBJECT INDEX

Aluminium
degradation of Al–Al and Al–Cu connections due to fretting, 53
X-ray determination of microstructural parameters of eroded Cu–Al alloys, 241

Bearings
analysis of couple stress lubricant in hydrostatic thrust bearing, 257
theoretical evaluation of impedance, capacitance and charge accumulation on roller bearings operated under electrical fields, 223

Capacitance
theoretical evaluation of impedance, capacitance and charge accumulation on roller bearings operated under electrical fields, 223
Cast iron
fretting fatigue in several steels and a cast iron, 175
Contacts
contact conditions and surface degradation mechanisms in low amplitude fretting, 39
the influence of relative slip range and contact material on the fretting fatigue properties of 3.5NiCrMoV rotor steel, 147
Copper
degradation of Al–Al and Al–Cu connections due to fretting, 53
X-ray determination of microstructural parameters of eroded Cu–Al alloys, 241
Corrosion
fretting corrosion of a high strength low alloy steel in synthetic seawater environments, 107
the influence of dissolved oxygen in seawater on the fretting corrosion of roping steel, 97

Electrical fields
theoretical evaluation of impedance, capacitance and charge accumulation on roller bearings operated under electrical fields, 223
Electron microscopy
modern measurement techniques in surface metrology: Part I; stylus instruments, electron microscopy and non-optical comparators, 271
Erosion
X-ray determination of microstructural parameters of eroded Cu–Al alloys, 241

Fatigue
damage formation during fretting fatigue, 163
fretting fatigue in several steels and a cast iron, 175
the influence of relative slip range and contact material on the fretting fatigue properties of 3.5NiCrMoV rotor steel, 147
on the mechanics of fretting fatigue, 129
Fretting
contact conditions and surface degradation mechanisms in low amplitude fretting, 39
damage formation during fretting fatigue, 163
degradation of Al–Al and Al–Cu connections due to fretting, 53
effect of lubricants on fretting wear of steel, 83
effects of temperature and ambient pressure on fretting properties of polyimide, 67
formation, readhesion and escape of wear particles in fretting and sliding wear in inert and oxidizing environments, 3
the fretting behaviour of a nitrided steel 38CrMoAl, 193
fretting corrosion of a high strength low alloy steel in synthetic seawater environments, 107
fretting fatigue in several steels and a cast iron, 175

© Elsevier Sequoia/Printed in The Netherlands

the influence of dissolved oxygen in seawater on the fretting corrosion of roping steel, 97
the influence of relative slip range and contact material on the fretting fatigue properties of 3.5NiCrMoV rotor steel, 147
on the mechanics of fretting fatigue, 129
velocity accommodation in fretting, 25
Friction
effects of oxygen in influencing friction characteristics of metals, 211

Impedance
theoretical evaluation of impedance, capacitance and charge accumulation on roller bearings operated under electrical fields, 223

Lubricants
analysis of couple stress lubricant in hydrostatic thrust bearing, 257
effect of lubricants on fretting wear of steel, 83

Metals
effects of oxygen in influencing friction characteristics of metals, 211
Metrology
modern measurement techniques in surface metrology: Part II; optical instruments, 289
modern measurement techniques in surface metrology: Part I; stylus instruments, electron microscopy and non-optical comparators, 271
Microstructure
X-ray determination of microstructural parameters of eroded Cu–Al alloys, 241

Optical instruments
modern measurement techniques in surface metrology: Part II; optical instruments, 289
Oxygen
effects of oxygen in influencing friction characteristics of metals, 211
the influence of dissolved oxygen in seawater on the fretting corrosion of roping steel, 97

Polyimide
effects of temperature and ambient pressure on fretting properties of polyimide, 67

Roller bearings
theoretical evaluation of impedance, capacitance and charge accumulation on roller bearings operated under electrical fields, 223

Seawater
fretting corrosion of a high strength low alloy steel in synthetic seawater environments, 107
the influence of dissolved oxygen in seawater on the fretting corrosion on roping steel, 97
Sliding wear
formation, readhesion and escape of wear particles in fretting and sliding wear in inert and oxidizing environments, 3
Steels
effect of lubricants on fretting wear of steel, 83
the fretting behaviour of a nitrided steel 38CrMoAl, 193
fretting corrosion of a high strength low alloy steel in synthetic seawater environments, 107
fretting fatigue in several steels and a cast iron, 175
the influence of dissolved oxygen in seawater on the fretting corrosion of roping steel, 97
the influence of relative slip range and contact material on the fretting fatigue properties of 3.5NiCrMoV rotor steel, 147
Stress
analysis of couple stress lubricant in hydrostatic thrust bearing, 257
Stylus instruments
modern measurement techniques in surface metrology: Part I; stylus instruments, electron microscopy and non-optical comparators, 271
Surfaces
contact conditions and surface degradation mechanisms in low amplitude fretting, 39
modern measurement techniques in surface metrology: Part II; optical instruments, 289

modern measurement techniques in surface metrology: Part I; stylus instruments, electron microscopy and non-optical comparators, 271

Thrust bearings
analysis of couple stress lubricant in hydrostatic thrust bearing, 257

Wear
effect of lubricants on fretting wear of steel, 83
formation readhesion and escape of wear particles in fretting and sliding wear in inert and oxidizing environments, 3
Wear particles
formation, readhesion and escape of wear particles in fretting and sliding wear in inert and oxidizing environments, 3

X-ray determination
X-ray determination of microstructural parameters of eroded Cu–Al alloys, 241
